

MS Climb to Mount Everest Basecamp - Oct 8-25, 2010
Fundraising for the Multiple Sclerosis Society of Canada

See reverse side
 for sponsorship form

Your name, message, Company Logo or Flag can travel with me to Everest Base Camp

Multiple sclerosis (MS) is an unpredictable, often disabling disease of the central nervous system — the brain and spinal cord. The disease attacks the protective myelin covering of the central nervous system, causing inflammation and often destroying the myelin in patches. In its most common form, MS has well defined attacks followed by complete or partial recovery. The severity of MS, progression and specific symptoms cannot be predicted at the time of diagnosis.

While it is most often diagnosed in young adults, aged 15 to 40, we know that it affects children, some as young as two years old. The impact is felt by family, friends and by the community. MS is unpredictable, affecting vision, hearing, memory, balance and mobility. Its effects are physical, emotional, financial, and last a lifetime.

Image of banner to be displayed on www.jimmarsh.ca/msclimb, facebook page, and MS donation page
 - list of donors, with weblinks, to be maintained on website until Oct 2011, date of next trip
